Mathematic 405, Fall 2015: Assignment #6

Due: Wednesday, April 1st

Instructions: Please ensure that your answers are legible. Also make sure that sufficient steps are shown. Page numbers refer to the course text.

Problem #1. Let $I = (a,b)$ be an interval. Suppose that $f : I \to \mathbb{R}$ is differentiable. Show that for any compact interval $I_\delta \subset I$ with $I_\delta = [x_0 - \delta, x_0 + \delta]$, one has

a) $f(I_\delta)$ is a compact interval.

b) $|f(I_\delta)| - |f'(x_0)||I_\delta| = |f(I_\delta)| - 2|f'(x_0)|\delta = o(\delta), \delta \to 0$. Here $|I|$ means the length of a compact interval $I$, so $|I_\delta| = 2\delta$. That is, $|f'(x_0)|$ measures the extent to which $f$ distorts length near $x_0$.

c) (Optional) Give a “geometric” interpretation of the chain rule using the above observation.

Problem #2. p. 163 # 6

Problem #3. p. 163 # 8

Problem #4. p. 163 # 13

Problem #5. p. 176 # 1

Problem #6. p. 176 # 4

Problem #7. p. 176 # 10

Problem #8. p. 192 # 1
