Textbook

Course Description
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, functions of several variables, linear systems, applications for systems of linear differential equations, probability distributions. Chapters 8-12 of the textbook.

Exams
First midterm: Tuesday, Feb 20, 10-11 am, in class.
Second Midterm: Tuesday, Apr 3, 10-11 am, in class.
Final exam: Thursday, May 3, 9-12 Noon. Location TBA.

Exam policy
Exams are closed book, closed notes. There will be no make-up exams. If an exam is missed with a valid excuse, the grade for that exam will be a weighted average of the grades obtained on subsequent exams. The grade for an unexcused exam will be a zero. You must contact the Academic Advising Office to obtain letters for excused absences. If you need special arrangements for the exam, you must notify the instructor in writing at least two weeks in advance.

Homework
Homework is posted online after the Monday lecture and is due on Monday, next week. It is your responsibility to check the course website regularly for updated information. The homework is to be handed in person, at the beginning of the lecture. No late homework is accepted. If you cannot turn in the hw on Monday,
make arrangements to bring it to Krieger 312 before that day.
You may not use Solution Manual or resources outside the ones permitted in completing the homework. Doing otherwise is considered cheating and will be punished.

Expectations
Keep up with the work on a daily basis. Understand the concepts (definitions, theorems) before you work on the homework problems. Read the textbook. Homework is your practice for the exam. Get used to writing down solutions. Being able to do that is not always the same as "understanding the material".
Don’t fall behind. Ask for help whenever you need it. The office hours are walk-in, no appointment necessary. If you need to meet at a different time, email to set up an appointment. If you have specific questions, simply send an email to the instructor or the TA.
Questions during lecture, section or via email are strongly encouraged. There are no "stupid questions" (within reasonable limits). If you need clarification with the course material, it is better to inform your instructor/TA as soon as possible.
Exams. Avoid "binge studying" the day before an exam. It is very important to get enough rest before the exam.

Attendance
Lecture and section attendance are mandatory. You will be responsible for all material covered in lectures, sections as well as in homework and assigned reading.

Grading
Your final grade takes is a combination of your homework and exam grades, and the weights are as follows

- Homework= 20%
- First Midterm= 20%
- Second Midterm=25%
- Final Exam= 35%

Academic Honesty
The university will punish cheaters with failure on an assignment, failure in a course, permanent transcript notation, suspension, and/or expulsion. Offenses may be reported to medical, law or other professional or graduate schools when a cheater applies. Violations can include cheating on exams, plagiarism, reuse of assignments without permission, improper use of the Internet and electronic devices, unauthorized collaboration, alteration of graded assignments, forgery and falsification, lying, facilitating academic dishonesty, and unfair competition. Ignorance of these rules is not an excuse. For more information see http://ethics.jhu.edu.

Collaboration
You may collaborate with other students in this course, but only under the following conditions: you may discuss homework problems with your colleagues or in your study group, but you are required to write the homework independently, on your own. You may not discuss the homework while you write it. No collaboration is allowed during exams. If you have questions about this policy, please ask the instructor.
